

University of Ljubljana
Faculty of *Electrical Engineering*

Laboratory of Modelling, Simulation and
Control

Laboratory of Autonomous Mobile Systems

CMSE textbook, master level: Control oriented modelling and simulation: methods and tools

Maja Atanasijević Kunc, Sašo Blažič, Gašper Mušič, Borut Zupančič
University of Ljubljana
Faculty of Electrical Engineering

Book contents

1. INTRODUCTION

2. MODEL PRESENTATION

2.1 Parametric and non-parametric models

2.2 MATLAB and Control System Toolbox

2.2.1 Introduction to MATLAB

2.2.2 Introduction to Control System Toolbox

Book contents (cont.)

3. SIMULATION

3.1 Introduction

3.2 Simulation schemes

3.3 Digital simulation of continuous models

3.3.1 Simulation with Matlab

3.4 Simulink

3.4.1 Introduction to Simulink

3.4.2 Simulation experiments

Book contents (cont.)

4. MODELLING FOR CONTROL

4.1 Theoretical modelling vs. identification

4.2 Identification models

4.2.1 Parametric models

4.2.2. Non-parametric models

4.3 Parametric identification methods

4.3.1. The Strejc model parameters identification

4.3.1. Model tuning methods

4.3.2. System identification based on linear regression

4.4 Identification of non-parametric models

Book contents (cont.)

5. BASIC CONCEPTS OF CONTROL

- 5.1 Introduction to control
- 5.2 Open-loop control system
- 5.3 Closed-loop control system
- 5.4 Control system in the operating point
- 5.5 Reference tracking mode
- 5.6 Disturbance rejection mode
- 5.7 Steady state of the control system
- 5.8 Stability of the control system

Book contents (cont.)

6. INDUSTRIAL CONTROL ALGORITHMS

6.1 Types of industrial controllers

6.2 Continuous controllers

6.2.1 Proportional controllers

6.2.2 Proportional - integral controllers

6.2.3 Controllers with differential term

6.3 Design of continuous PID controllers

6.3.1 Tuning rules

6.3.2 Computer optimization

6.4 Realization of PID controllers

Book contents (cont.)

7. DISCRETE-EVENT MODELLING AND SIMULATION

7.1 Discrete event systems

7.1.1 Events and random variables

7.1.2 Random processes

7.2 Discrete event simulation strategies

7.2.1 Event scheduling scheme

7.2.2 Activity scanning scheme

7.2.3 Process-oriented simulation scheme

Book contents (cont.)

7.3 Queuing systems and Simulink-SimEvents

7.3.1 Queues and servers

7.3.1 Generation of events and entities

7.3.2 Performance measures

7.4 Simulation experiments with SimEvents

8. REFERENCES
